

WHAT IS OUR TRANSPORTATION FUTURE, AND HOW DO WE GET THERE?

The Proctor Transportation Plan will define the community's vision for how it would like its transportation system to look and function. A central theme is supporting the safe and efficient movement of people of all ages, abilities and incomes, as well as the safe and efficient movement of goods in and through the City of Proctor and adjacent neighborhoods.

The planning process will take place during the summer and fall of 2020, and will bring forward key ideas from previous planning efforts, gather additional input from community stakeholders, and produce a comprehensive guiding plan. The final Plan will also recommend short- and long-term strategies to implement the vision. This work will position Proctor well into the future with a vision and direction for upcoming transportation projects that meet community needs and achieve the goal of an integrated, multi-modal transportation system.
